GUARDED CULTURE INSTRUMENT

The industry standard for cultures of any deep body cavity where guarding is necessary to avoid swab contamination. Our patented design is regarded as the finest for uterine, pharyngeal, nasal cultures, and bladder cultures

Guarded tip totally covers the end of the outer sleeve, preventing contamination of the sterile swab during passage.

The specially made plastic swab is highly resistant to accidental breakage. However, it can be broken into transport media for holding when cultures are taken outside of the clinic.

Available in:

- KI-3000 - cotton swab
- KI-3350 - polyester swab
- KI 650 - 6 Inch sterile polyester swab in its own dry transport tube.

CHOOSE COTTON OR POLYESTER STERILE SWAB • PATENTED DESIGN
